

IBMP welcomes applications for the position of Institute Director

The Institut de biologie moléculaire des plantes (IBMP), a CNRS institute located in Strasbourg (France), invites expressions of interest from potential candidates for the position of Institute Director.

The IBMP is one of the largest plant research institutes of the CNRS, with an international reputation for excellence. Many pioneering discoveries were made at the IBMP since its founding in 1989. The institute assembles world class scientists working in diverse scientific fields such as organellar genomics, structure and function; virology, RNA biology and epigenetics; and metabolism and hormones. IBMP hosts state-of-the-art core facilities organized within an intimate and collaborative environment. The institute is situated on the main campus of the University of Strasbourg, one of the top universities in France. The vibrant city of Strasbourg is home to several European institutions and located in the heart of Europe, near the borders of Germany and Switzerland.

Applicants of any nationality should have an excellent academic track-record in plant biology with leadership experience and management skills. The new director is expected to start her/his mandate in January 2023. Candidates should provide their CV with a letter of interest before September 30, 2020. Please send all applications or other inquiries to ibmp-direction2023@unistra.fr

All submissions will be kept strictly confidential.
